

NANAIMO RIVER

83-FDC-15

Field: November 23 & 24, 1983
Office: November 26-29, 1983

Survey carried out under unpleasant field conditions by a 5-man crew under the supervision of T. Dignan.

Data produced in S.I. Units and consists of:

- 34 high water mark elevations resulting from flood of November 14/15, 1983. Points are located at 1982 channel survey cross-sections, and keyed by No. to Drawing 5383-2, Sheets 1 & 2.
- Representative photos and explanatory notes.
- Historical data from Mac/Blo gauge @ Cassidy.

All points valued by direct levelling referred to G.S.C.

Data recorded in F/B #2411.

Photo negatives - T. Dignan File.

Requested by R. Nichols, Planning Section.
